

# Winter Wheat

**New!**

## AP503 CL<sup>2</sup>

### First High Tolerant CL Winter Wheat

Now you can control tough grass weeds with fall and spring herbicide applications and the only 2-gene CL winter wheat.

## HAWKEN

### High Performance Winter Wheat

If you plant winter wheat, you want the same agronomic qualities you expect from your spring wheat—disease resistance, short height and straw strength. AgriPro Hawken—no compromises.

## JAGALENE

### U.S. Winter Wheat Champion

Jagalene provides an unmatched combination of agronomics and yield, which has made money for farmers across the Great Plains.

## NUFRONTIER

### Value-Added Wheat Opportunity

Considering a value-added program? Contact your local AgriPro Associate and find out how NuFrontier adds to the bottom line.

# Spring Wheat

## KUNTZ

### The Yielder That Stands

Kuntz provides AgriPro's best yield potential and straw strength for the Northern Plains, but don't overlook Kuntz's superior agronomics.

## AP604 CL

### CLEARFIELD\* Production System

Get control of nearly every grass and broadleaf weed, including volunteer cereals, with AP604 CL. A superior, herbicide-tolerant variety with high yield potential.

## KELBY

### The Complete Agronomic Variety

Reduce your risk with a variety that does it all. No other variety offers such a complete package of disease tolerance, quality and agronomics.

## FREYR

### Performance Under Pressure

Freyr has proven its consistency and yield across Montana. Challenged by disease, scab, drought and tough conditions, Freyr gets the job done.

Superior genetics...locally grown™

### Superior Genetics...

When it comes time to select wheat varieties for your operation, there's more to consider than this year's trial data. When you plant AgriPro®, you are planting proven, grower-tested varieties that come from a program that excels in overall performance in the field—day in, day out, year after year.

### An Ongoing Commitment to Quality Research

Developing the best wheat varieties available requires a long-term commitment to research and testing with a single goal—to make you, the grower, more profitable.

With 18 research locations and five demonstration sites spread across the Northern Plains, AgriPro has built the largest wheat breeding program in the nation.

Each year our research team, led by 30-year wheat breeding veteran Joe Smith, makes up to 1,000 cross combinations and generates 50,000 F5 progeny lines, developing the traits that will help take the industry to the next level of success.

## 2009 AgriPro® Comparison Chart for Montana

#### Protein Content:

- 1 = Highest
- 9 = Lowest

These agronomic assessments are made by AgriPro scientists and reflect each variety's relative performance within these characteristics prior to and during the 1999-08 crop year. Specific conditions may cause variations within those characteristics. These relative protection values are based on current pest and disease populations. These have been known to shift periodically and may cause changes in specific evaluations. Resistance to many other diseases and pests is sensitive to environmental conditions, plant development stages and the presence and intensity of other diseases which may result in specific evaluation inconsistencies. This chart is updated annually to reflect the most current trends.
