 9 = Latest

Height:  
 1 = Shortest  
 9 = Tallest

Protein Content:  
 1 = Highest  
 9 = Lowest

These agronomic assessments are made by AgriPro scientists and reflect each variety's relative performance within these characteristics prior to and during the 2006-09 crop year. Specific conditions may cause variations within those characteristics. These relative protection values are based on current pest and disease populations. These have been known to shift periodically and may cause changes in specific evaluations. Resistance to many other diseases and pests is sensitive to environmental conditions, plant development stages and the presence and intensity of other diseases which may result in specific evaluation inconsistencies. This chart is updated annually to reflect the most current trends.

# 2010

## NORTHERN PLAINS

### SEED GUIDE

When it comes time to select wheat varieties for your farm, there's more to consider than this year's trial data. AgriPro® varieties are proven, grower-tested lines that come from a program that excels in overall performance in the field—*day-in and day-out, year after year*. Your source for AgriPro's industry-leading varieties is your local AgriPro Associate. He is a professional seedsman who can provide the local experience and knowledge to assist you with finding the best varieties for your farm.

## Brennan

### New! Balanced With High Yield And Protein

The variety with high yield potential that doesn't compromise protein or great agronomics.

Why not have it all?

*Bringing plant potential to life*

## Jenna

### New! The Yielder With Protein

The medium maturing variety in your line-up that doesn't compromise on agronomics or protein. You have your choice of very high yielding varieties, why not maintain protein, height and straw strength?

## Kuntz

### The Yielder That Stands

Kuntz provides AgriPro's best yield potential and straw strength for the Northern Plains, but don't overlook Kuntz's superior agronomics.

## Kelby

### The Complete Agronomic Variety

Reduce your risk with a variety that does it all. No other variety offers such a complete package of disease tolerance, quality and agronomics.

## Hawken

### High Performance Winter Wheat

If you plant winter wheat, you want the same agronomic qualities you expect from your spring wheat—disease resistance, short height and straw strength. AgriPro Hawken—no compromises.

## AP604 CL

### CLEARFIELD\* Production System

Get control of nearly every grass and broadleaf weed, including volunteer cereals, with AP604 CL. A superior, herbicide-tolerant variety with high yield potential.

## AP503 CL<sup>2</sup>

### Two Genes for Tolerance

AP503 CL<sup>2</sup> is the first hard red winter wheat with two genes for tolerance to the Beyond family of herbicides. This means greater options in weed control with both fall and spring herbicide applications.

Protect your AgriPro seed investment with Syngenta Seed Care products. To find out more, call your ag products dealer or Syngenta Seed Care Specialist Jay Stroh (218-826-6380). [SyngentaSeedTreatment.com](http://SyngentaSeedTreatment.com)
