- 3 = Very Good
- 4 = Very Good to Good
- 5 = Good
- 6 = Fair to Good
- 7 = Fair
- 8 = Fair to Poor
- 9 = Poor

Maturity:

- 1 = Earliest
- 9 = Latest

Height:

- 1 = Shortest
- 9 = Tallest

These agronomic assessments are made by AgriPro scientists and reflect each variety's relative performance within these characteristics prior to and during the 2004-09 crop year. Specific conditions may cause variations within those characteristics. These relative protection values are based on current pest and disease populations. These have been known to shift periodically and may cause changes in specific evaluations. Resistance to many other diseases and pests is sensitive to environmental conditions, plant development stages and the presence and intensity of other diseases which may result in specific evaluation inconsistencies. This chart is updated annually to reflect the most current trends.
